

Exercises and Grading Policy

You must submit all the exercises.

Grading Policy:

Home Assignments – 100%

Communications

There will be a forum for each exercise, use it for questions. Do not email me for exercises questions.

In order to make lecturer - student communication reliable and efficient, please comply with the following rules:

- The forums should be kept **small. Do not abuse them.** In other words, try to think for yourself before you post.
- Make sure to post exercise questions **only** in the relevant exercise forum!
- You should regularly read messages published on the forums. **Any message that is posted by me will be considered known by all, and will not be repeated elsewhere.** To stress this point, in case when, for example, a clear guideline concerning the exercise implementation is published on the forum, anyone who does not comply with the guideline will lose points.
- I will make my best effort to answer your questions within two days.
- If you have special personal situations such as reporting miluim, please write me an e-mail.

Late Submission Policy

3 points for each day of delay.

Individual Work Policy

Each student must work by himself.

How to Submit

Exercises are to be submitted via mail to jce.netlab@gmail.com. For each project create a tar file called `ex#.tar` (i.e. `ex1.tar`). Any mistake in creating the tar, adding unneeded files, missing files (like README), README with wrong format, lower/upper case mistakes etc. will result in **5 points penalty** since these mistakes will cause the automatic tests to fail. Use the following command line in order to create the tar file:

```
tar -cvf ex#.tar <your files>
```

README submission

The README file should include the following details, in the following order, each in a separate line:

- The login of the author.
- The personal details of the author — name and ID.
- The name of the exercise.
- A list of the submitted files, with a one line description for each file.
- Any remarks you have about special cases, implementations, additional features or anything else you think the checker should know.

Any mistake in creating the README will cost **5 points penalty**, since you are failing automatic testing.

Appeals

We realize that checks are not perfect and we may make mistakes. Therefore the course's exercise grades are **automatically given a bonus of 3 points** (Note though that an exercise grade cannot exceed 100). So if your argument is about 3 points or less, do not appeal. Submitting an appeal will cause you to lose the 3-point bonus. If you make an appeal, the whole exercise will be checked more thoroughly, which also means that your grade may drop!

A student that still wishes to submit an appeal must write the appeal within **one week** after the graded homework was returned. Appeals have to be submitted to jce.netlab@gmail.com email, using the following format.

Subject: **Appeal ExN, ID: studentID**

where 'N' denotes the number of the exercise you appeal.

- Your name, ID and login in the first lines.
- A list of error codes you appeal. (ERRLIST: errN...)
- An error source (ERRSRC:...) stated clearly and shortly.
- Your reason (CLAIM:...) for dismissal of these errors, stated briefly and clearly!
